HOW TO DETECT LIES ON THE INTERNET

1

BE AWARE

In this modern age of the internet and technology it has made it very easy for people to spread misinformation

2

LEARN THE TYPES OF LIES

Today, there is a significant prevalence of AI and the creation of AI content for real people who usually say things they wouldn't. This can be hard for people who aren't fully aware of AI.

3

MISINFORMATION

Currently, in The United States, there is an ongoing election as of 10/30/24, and there is a lot of misinformation being spread I.E; "Haitian people are eating pets," which is very not true but is still being presented and believed by an audience base

4

FIND TRUSTED SOURCES

A website I like to use is called Allsides.com; it is an excellent website that has charts of where each news outlet stands politically to

5

KEEP AN OPEN MIND

Everyone lies or tweaks the truth I believe firmly that when consuming media for information and facts is to have an edge of skepticism and awareness of the fact that things can be altered, taken out of context, or just plain fake
